

Muhammad Bin Djafar Almasyhur

Applied AI Engineer | Agentic Systems | LLM Integration | Workflow Automation
[+62 812-3137-2105](tel:+6281231372105) | muhammadmasyhur2@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Applied AI Engineer with production experience shipping agentic systems, LLM integrations, and end-to-end automation pipelines. Built a LangGraph + FastAPI Trust and Safety Review Agent (deployed on Railway/Vercel) using Gemini models with structured multi-node orchestration and a Next.js review interface. Automated business-critical workflows at a Singapore-based company, cutting manual operational time by ~80%. Comfortable moving from agent graph design to API deployment to lightweight frontend, and knowing when n8n beats custom code.

EXPERIENCE

AI Automation Engineer | MAYFEYR Worldwide Pte. Ltd. Aug 2025 - Mar 2026 | Remote | Singapore

- Designed and shipped a production AI automation pipeline (Python + n8n + LLM integration) that mapped manual business workflows into fully automated sequences, reducing daily operational intervention by ~80% across data ingestion, processing, and cross-system sync.
- Built LLM-integrated automation nodes handling structured data extraction, classification, and conditional routing, reducing reliance on manual review for high-volume repetitive tasks.
- Architected a competitor price-intelligence pipeline with SQL optimization enabling real-time dynamic pricing decisions; eliminated query bottlenecks across multiple product categories.
- Built full-stack internal tooling (Python + JavaScript + GraphQL) that automated Shopify store go-live workflows end-to-end, cutting launch wait times by more than 50% and eliminating cross-team handoff overhead.

Software Engineer Intern | PT Suitmedia Kreasi Indonesia Sep 2024 - Dec 2024 | Indonesia

- Engineered production REST APIs (.NET/C#) with JWT authentication and WebSocket real-time communication in a 10+ developer Agile team; maintained zero-regression CI/CD across sprint cycles.

Full-Stack Developer Intern | PT ADMA Digital Solusi Feb 2024 - Jun 2024 | Indonesia

- Shipped 37 feature modules end-to-end in 14 weeks on a POS platform (Laravel, MySQL), owning full delivery from architecture design through testing and documentation.

PROJECTS

Campaign Trust and Safety Review Agent | LaunchGood Portfolio 2026 | Deployed

- Built a LangGraph agentic system for automated campaign trust and safety review; routes campaigns through multi-node evaluation (content, risk, compliance) using Gemini Flash for high-volume classification nodes and Gemini Pro for decision/eval nodes.
- FastAPI backend with structured tool definitions and async agent execution; Next.js frontend with human-in-the-loop review interface for flagged campaigns; deployed on Railway (API) and Vercel (UI).
- Designed explicit human/AI boundaries: AI handles initial classification and evidence surfacing, humans retain final approval on borderline and high-risk flags.

Batik Generative AI - Diffusion Model Fine-Tuning | Thesis Research Apr 2025 - Aug 2025

- Fine-tuned Stable Diffusion (DreamBooth) for domain-specific Batik pattern generation; evaluated with FID and CLIP score metrics alongside domain expert validation loops.

Educational Information System | Madrasah Al-Fath Mar 2026 - Present | Malang

- Full-stack school management platform (Golang/Gin + Next.js + PostgreSQL) with RBAC across 3 user tiers and high-performance RESTful APIs with modular service boundaries.

TECHNICAL SKILLS

Agentic Frameworks: LangGraph, LangChain - production agent graphs, multi-node orchestration, tool/function design

LLM APIs: Anthropic (Claude), Google (Gemini Flash/Pro), OpenAI - structured outputs, RAG, LLM-as-judge eval

Automation Platforms: n8n (self-hosted + cloud), Make.com - LLM-integrated workflows, trigger/action chains, data transformation

Backend & APIs: Python (FastAPI), Golang (Gin), .NET/C# - REST, GraphQL, WebSockets, JWT, async

Frontend: Next.js, React, TypeScript - SSR/SSG, lightweight internal UIs

Databases: PostgreSQL, MySQL, MongoDB - schema design, query optimization; pgvector-ready

DevOps: Docker, CI/CD pipelines, Railway, Vercel, Git

AI/ML: PyTorch, Stable Diffusion, DreamBooth, Computer Vision (FID, CLIP score)

EDUCATION

B.Sc. Computer Science - Brawijaya University

GPA 3.80/4.00 | Cumlaude | 2021 - 2025

Thesis: Fine-tuned Diffusion Models for Batik pattern generation, bridging generative AI research with cultural domain applications.
